

Rakesh Bind

AI Product Manager | AI Product Owner | Agentic AI | GenAI | LLMs | RAG | AI/ML | Solution Architecture

📞 8872253994 | ✉️ rakeshbind771@gmail.com |  RB Portfolio | 

Professional Summary:

AI Product Manager, Product Owner and Solution Architect with **7+ years of experience** delivering enterprise data, analytics, AI/ML, Generative AI and software products across healthcare, publishing, workforce and recruitment domains.

Experienced in owning AI and technology products end-to-end across **problem discovery, product vision, roadmap definition, requirements, PRDs, AI solution design, architecture, Agile delivery, UAT, stakeholder management, production launch and continuous improvement.**

Led cross-functional **AI, web development, Data Engineering, BI and ML teams** to deliver production solutions including **multi-agent AI observability and root-cause analysis, AI Agents platforms, predictive analytics, recommendation systems, NLP/OCR automation and similarity-based drug competitor identification.**

Strong technical understanding of **LLMs, Generative AI, Agentic AI, RAG, conversational AI, AI agents, multi-agent orchestration, prompt engineering, tool/function calling, AI evaluation, AI observability, model lifecycle, MLOps and enterprise AI architecture.**

Experienced in translating complex business and operational workflows into **AI product requirements, agent workflows, data requirements, system architecture, measurable KPIs and executable roadmaps**, while working closely with engineering, data science, design, business, sales and client teams.

Strong product mindset with the ability to evaluate **build-vs-buy decisions, AI feasibility, model/LLM selection, quality vs. latency vs. cost trade-offs, human-AI collaboration, security and governance requirements.**

Core Strengths:

- **AI Product Management:** AI Product Strategy & Vision, Product Roadmaps & Product Lifecycle Management, Product Discovery & Problem Framing, PRDs, Epics, User Stories & Acceptance Criteria, MVP Definition & Feature Prioritization, Backlog Management & Sprint Planning, Agile/Scrum & UAT, Product Analytics & KPI Definition, Experimentation & A/B Testing, Customer Discovery & Feedback Analysis, Competitive Analysis, Product Demos & Go-to-Market Support, Stakeholder & Executive Communication
- **Generative AI & Agentic AI:** Large Language Models (LLMs), Generative AI Applications, AI Agents & Multi-Agent Systems, Agentic Workflows, Agent Planning & Orchestration, Tool / Function Calling, Agent Memory & State, Human-in-the-Loop, Conversational AI, Prompt Engineering, Context Engineering, RAG / Retrieval-Augmented Generation, Semantic Search & Hybrid Search, Embeddings & Vector Search, Reranking & Retrieval Optimization, AI-powered Workflow Automation
- **AI/ML:** Supervised & Unsupervised Learning, Classification & Regression, Predictive Analytics, Recommendation Systems, Similarity Modeling, Feature Engineering, Model Evaluation, NLP & OCR, Forecasting, Model Drift & Data Drift, MLOps & Model Lifecycle, Responsible AI
- **AI Evaluation & Observability:** LLM Evaluation, RAG Evaluation, Agent Evaluation, Hallucination / Groundedness Assessment, Retrieval Quality, Tool-Call Evaluation, AI Quality Metrics, Logs, Metrics & Distributed Tracing, OpenTelemetry, Trace Correlation, AI-assisted Root-Cause Analysis, Latency & Cost Monitoring, Production AI Monitoring
- **AI Security, Governance & Risk:** Prompt Injection & LLM Security, AI Guardrails, Data Privacy & Access Control, IAM & Least-Privilege Concepts, Responsible AI, Model Governance, Model Cards, Model Lineage, Data Lineage, Bias & Explainability, GDPR / CCPA Concepts, SOC 2 Concepts, PCI DSS Concepts, NIST AI Risk Management Framework

Technical & Platform Expertise:

- **Generative AI / LLM:** LLMs, Generative AI, OpenAI APIs, Gemini, Claude, Prompt Engineering, Context Engineering, Structured Outputs, Function Calling, Tool Calling, Conversational AI
- **Agentic AI:** AI Agents, Multi-Agent Systems, Agent Orchestration, Agent Planning, Agent Workflows, Human-in-the-Loop, Google ADK, LangChain, LangGraph, CrewAI, MCP, Agent Tool Integration

- **RAG & Search:** RAG, Embeddings, Vector Databases, Semantic Search, Hybrid Search, Chunking, Metadata Filtering, Reranking, Query Rewriting, Retrieval Evaluation, Grounded Generation
- **Machine Learning:** Python, Scikit-learn, Pandas, NumPy, Predictive Analytics, Classification, Regression, Similarity Modeling, Recommendation Systems, Feature Engineering, Model Evaluation, NLP, OCR
- **AI Application Engineering:** Python, Fast API, REST APIs, API Integration, Docker, JSON, Event-driven Workflows, Authentication, Authorization, Webhooks
- **Google Cloud:** BigQuery, Cloud Logging, Pub/Sub, Cloud Trace, IAM, Cloud Storage, Data Fusion, Data Prep, DAGs, Virtual Machines, Google ADK, Gemini
- **Azure / Data Platforms:** Microsoft Fabric, Azure Data Factory, Snowflake, MySQL
- **AI Observability:** Open Telemetry, Centralized Logging, Distributed Tracing, Trace Correlation, Logs, Metrics, Application Monitoring, AI/LLM Observability, Root-Cause Analysis
- **BI & Analytics:** Power BI, Power BI Embedded, DAX, Row-Level Security, Qlik, Tableau, KPI Design, Data Modeling
- **Engineering & Delivery:** Docker, Bitbucket, Agile/Scrum, Product Roadmaps, Backlog Management, Sprint Planning, UAT, Risk Management, Stakeholder Management

Professional Experience:

Primotech, Mohali, Punjab

Jun 2023 – Aug 2026

AI Product Owner | Solution Architect | Senior Project Lead (Data & AI Division)

- Lead **AI, web development, data engineering and BI teams** delivering enterprise AI, data and digital products for global clients.
- Own end-to-end product delivery across **business discovery, requirements, product workflows, solution architecture, development, UAT, stakeholder sign-off and production delivery**.
- Translate complex business and operational problems into AI-enabled product capabilities, functional requirements, technical workflows and executable engineering backlogs.
- Lead product and solution architecture across **Generative AI, AI agents, AI/ML, APIs, Google Cloud, data platforms, analytics and web applications**.
- Collaborate with AI engineers, software developers, data engineers, BI teams, business stakeholders and clients to align technical execution with product outcomes.
- Manage product/project roadmaps, priorities, dependencies, risks, timelines and stakeholder communication.
- Lead client discovery, solution scoping, technical discussions, pre-sales and proposal development for AI, data and analytics engagements.
- Lead product demos and communicate AI solution capabilities, value propositions and technical trade-offs to business and client stakeholders.

Key Projects:

1. Book Publishing Company - Data & BI Modernization

- Led a large-scale BI and data modernization program for a global book publishing client.
- Led migration from **Talend, Qlik, Snowflake and legacy systems to Google Cloud**.
- Re-architected data pipelines using **Airflow DAGs and BigQuery**.
- Implemented **Power BI Embedded with Row-Level Security (RLS)**.
- Designed and delivered **5+ custom web applications** and a centralized portal integrating applications and BI reports.
- Enabled distributor-level access control and personalized data views.

2. Medical Care Company - AI Agents Platform

- Served as **Product Owner and Solution Architect** for an AI-driven productivity platform.
- Led design and delivery of an **AI Agents Portal** supporting operational automation and productivity use cases.
- Defined product workflows, user journeys, business logic, functional requirements, acceptance criteria and scalability considerations.
- Delivered modules including Template Management System, Wallboard Creation, Assembly & Distribution, Wallboard Editor, QR Code Generator, Drug Competitor Analysis, Conference Data Analysis
- Coordinated AI and web development teams to translate operational workflows into client-facing AI-enabled products.

3. Autonomous AI Log Monitoring & Observability Platform

- **Tech Stack:** Python, FastAPI, Google Cloud Logs, Pub/Sub, Cloud Trace, IAM, OpenTelemetry, Google ADK, Gemini, Claude, Docker, Bitbucket
- Led the **AI and web development team** in delivering a production-grade AI-powered observability platform using **multi-agent AI** for automated log analysis, debugging and root-cause analysis.
- Defined product requirements and workflows for **real-time monitoring, centralized logging, telemetry analysis and AI-assisted incident investigation** across distributed services.
- Led integration of **Google Cloud Logs, Pub/Sub and Cloud Trace with OpenTelemetry** to enable end-to-end trace correlation across services.
- Led development of a centralized logging library and **FastAPI APIs** supporting real-time monitoring and AI-driven analysis workflows.
- Worked with **Google ADK, Gemini and Claude** to implement multi-agent workflows for automated log analysis and debugging.
- Defined agent responsibilities, workflow logic, system interactions, technical requirements and delivery priorities across AI and web teams.
- Coordinated architecture and implementation across **Python, FastAPI, Google Cloud, OpenTelemetry, Docker and AI agent components**.

4. Drug Competitor Identification System

- **Tech Stack:** Python, Pandas, NumPy, Scikit-learn, Google BigQuery, ETL Pipelines, Similarity Modeling, Data Engineering
- Led delivery of a data-driven AI/ML solution for identifying and ranking competitor drugs using **similarity modeling and enriched healthcare datasets**.
- Defined product requirements and analytical workflows for large-scale drug data ingestion, transformation, feature engineering and competitor identification.
- Designed scalable ETL workflows for processing and preparing large healthcare/drug datasets.
- Applied **attribute-based and text-based similarity techniques** to identify and rank closest competitor drugs for market intelligence.
- Worked with engineering and data teams to translate business requirements into scalable data-processing and similarity-modeling workflows.

Additional Contributions:

- Led pre-sales, solution scoping and technical proposal development for **AI, analytics, data and digital transformation engagements**.
- Designed solutions for chatbot platforms, financial systems, ETL frameworks and AI-based applications.
- Supported client onboarding and digital transformation initiatives by translating business problems into product roadmaps and technical solution plans.

Integration International Inc, Pune, Maharashtra
Project Lead (AI, Data & Analytics Products) - RDE

Jul 2021 - Feb 2023

- Led **AI/ML, analytics and data platform products** across enterprise use cases, aligning product capabilities with business objectives.
- Led cross-functional **BI, Data Engineering and AI/ML teams** to deliver products aligned with business objectives.
- Owned product lifecycle activities including requirements, solution design, workflow definition, sprint execution and stakeholder delivery.
- Defined AI/ML workflows for **predictive analytics, recommendation systems, forecasting, NLP and OCR-based document processing**.
- Collaborated with ML engineers on **feature definition, model validation and business interpretation of model outputs**.
- Led delivery of a Medical Data Intelligence Platform incorporating Power BI reporting, sales prediction models, OCR-based document processing and data governance.

- Led delivery of Workforce Intelligence Platform (Workpod) supporting talent analytics, candidate matching logic and real-time KPI dashboards.
- Designed data validation, reconciliation and automation workflows for email and document processing.
- Led cross-functional delivery and ensured alignment between business requirements, technical teams and product outcomes.

Rangam Consultants Inc, Vadodara, Gujarat

Sept 2019 - Jul 2021

Data Analyst | Product Analytics | Power BI & ML Analyst

- Worked on product analytics for the SourcePros ATS platform, enabling data-driven decision-making across recruitment and operations.
- Defined and tracked product KPIs including **Time-to-Fill, Submission-to-Success Ratio, Recruiter Productivity and Client Delivery Efficiency**.
- Translated operational and user data into actionable product insights to improve platform performance and business outcomes.
- Designed and developed interactive **Power BI dashboards using advanced DAX, data modeling and visualization techniques**.
- Performed exploratory data analysis using **SQL and Python** to identify trends, bottlenecks and optimization opportunities.
- Built and optimized data pipelines and transformations for structured reporting and analytics.
- Developed scalable data models and calculated metrics to improve reporting consistency and accuracy.
- Applied machine learning techniques for **predictive analytics, pattern recognition and performance forecasting**.
- Supported recruiter performance prediction, hiring trend analysis and operational optimization.
- Contributed to data preprocessing, feature engineering, model evaluation and performance tuning.
- Collaborated with stakeholders to align analytical solutions with business use cases and decision-making needs.

ACS Global Tech Solutions, Noida, Uttar Pradesh

Jan 2019 - Aug 2019

Graduate Trainee - Campus Placement Program

- Selected through a mandatory campus placement program during the final semester of B.E. Computer Science.
- Gained early exposure to corporate workflows, client communication, and professional practices.
- Worked on candidate screening and coordination as part of a structured training assignment.
- Intentionally transitioned into core Computer Science, Data, and AI/ML roles after graduation to align with long-term technical and product career goals.

Education:

- **B.E. in Computer Science Engineering**, Chandigarh University - 2019

Career Focus:

AI Product Manager | AI Product Owner | Senior Product Manager - AI/ML | Agentic AI Product Manager | AI Solutions Product Lead | GenAI Product Manager

Focused on building and scaling enterprise AI products across **Generative AI, Agentic AI, RAG, conversational AI, intelligent automation, AI/ML, customer experience and data-driven decision systems**, combining product leadership with strong technical understanding of AI architecture, evaluation, security, observability and production delivery.
